EDUCATION

Hofstra University

B.S. Computer Science | Dean's List

Hempstead, NY

Aug. 2022 – May 2026

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Systems Programming, Computer Architecture, Software Engineering, Cryptography, Web Application Development

EXPERIENCE

Disko

Software Engineering Intern

Remote

Mar. 2025 – Present

- Led the full codebase migration from Angular to Next.js, reducing build complexity and accelerating deployment cycles for a production application.
- Built a reusable UI component library with Next.js, Shadcn, and Tailwind CSS, cutting redundant styling work across the codebase and ensuring consistent cross-device rendering.
- Designed and maintained REST API integration layer between React front-end and Node.js backend, handling state synchronization and structured error handling.
- Replaced legacy auth flow with session-based authentication via Auth.js, closing security gaps on both client and server-side actions.

Hofstra University MakerSpace

Software Developer

Hempstead, NY

Jun. 2024 – Present

- Architected and deployed a containerized student and staff management platform serving the department's daily operations, self-hosted on a VPS with Docker, Traefik, Next.js, BetterAuth, and PostgreSQL.
- Developed a REST API for real-time machine usage tracking, delivering data-driven reports that directly informed department resource allocation.
- Led a 4-person team using Agile/Scrum, owning sprint planning, issue triage, and delivery of new features end-to-end.

Hofstra University

Computer Science Technician

Hempstead, NY

Oct. 2022 – Present

- Rebuilt and hardened department mail infrastructure post-breach using Postfix, ClamAV, RFC standards, SSH guard, and firewalls deployed to an AWS EC2 instance
- Implemented Multi-factor authentication for lab environment SSH access, eliminating thousands of daily brute-force probing attempts.
- Automated VM provisioning with n8n workflows orchestrating Ansible playbooks, handling dynamic IP, and resource allocation and reducing manual provisioning time for new virtual machines.
- Provisioned IBM Storage Scale and HPE PFSS high-performance storage for an NVIDIA GPU compute cluster via Ansible, enabling researchers to utilize the full cluster without manual storage configuration.

PROJECTS

MotionDesk | *Swift, Metal, SwiftUI, Next.js, PostgreSQL, Polar*

2026

- Shipped the first GPU-accelerated live wallpaper engine for macOS featuring 16 scenes with real-time cursor-responsive physics, rendered via Apple Metal for smooth, battery-efficient performance across Intel and M-series chips.
- Built full-stack web platform (Next.js, PostgreSQL, Polar) for license management, subscriptions, and DMG based binary downloads; acquired 1000+ active users through various payment plans.

SaaSStrike | *Next.js, PostgreSQL, NeonDB, OpenAI API, Reddit API, Polar*

2025

- Built a SaaS platform that applies LLM prompt engineering and a RAG pipeline over Reddit data to surface validated startup opportunities; acquired 60+ users generating hundreds of business ideas.
- Integrated Polar.sh for subscription billing and implemented credit-based usage metering with automated quota enforcement.

Authlink | *Next.js, Rust, Node.js, Solana, NTAG 424 NFC*

2024

- Designed and implemented a physical product authentication system pairing Solana on-chain records with NTAG 424 NFC chips to deliver tamper-proof and guaranteed authenticity for luxury goods and retail products.

ACHIEVEMENTS

1st Place — Amazon-Sponsored CTF Competition | *\$6,000 Prize*

Nov. 2025

- Competed against teams from NYU, St. John's, NYIT, and NCC across Web Exploitation, SQL Injection, Reverse Engineering (binary analysis, decompilation), PWN (buffer overflows), and Cryptography (hash cracking, JWT exploitation).

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, Java, C, C++, Rust

Frameworks & Libraries: Next.js, React, React Native, Node.js, Expo, Tailwind CSS, Shadcn/UI

DevOps & Infrastructure: Docker, Ansible, n8n, Traefik, AWS EC2, Cloudflare R2, Git, Linux (RHEL), Postfix, SSH hardening

Databases & Tools: PostgreSQL, NeonDB, Supabase, Postman, Jira, Confluence
